Road map

- Unit 3: Language, Brain, & Diversity
 - 21 Acquired dyslexia (review)
 - 22 Diversity & multilingualism

The dual-route model

Review

- Dehaene suggests that when learning to read, humans co-opted (recycled) a brain area that was already good at recognizing the visual features that make up writing systems. It's called the visual word form area.
- Becoming literate increases VWFA's response to words and decreases its response to faces.
- Types of acquired reading disorders:
 - deep dyslexia: Can't read non-words, makes semantic substitutions
 - alexia: Can't read
 - surface dyslexia: Can't read non-words
 - phonological dyslexia: Can't read irregular words
- Dual route model can account for some of symptoms of acquired reading disorders

Learning objectives

- Name at least two ways languages can vary
- Name 4 types of bilingualism
- Name at least one difference between knowledge of a first language and knowledge of a second language
- State the difference between analytic and synthetic languages
- Describe a piece of evidence that supports the idea that a bilingual's languages are not totally separate during processing
- Define transfer error
- Define marked and unmarked

Menti

- What languages do you speak or understand **fluently**?
 - Fluently here meaning you can get by in a conversation
- What languages have you studied?

Group chat or think alone

- What do languages have in common?
- What do languages differ on?
 - Try to come up with at least one example between two languages that you/your group knows
- What ratio of people in the world are multilingual vs. monolingual?
- How does learning more than one language affect the language acquisition process?
- How does knowing more than one language affect speaking/comprehension?
- Do multilinguals have different semantic representations for the words they know?

Similarities and differences between languages

- What are some languages that you know that are closely related?
 - How do you know they are related?

Similarities and differences between languages

- Vocabulary
- Word order (e.g., SVO like English vs. SOV like Japanese)
- Synthetic vs. analytic languages
 - Synthetic: morphemes adding onto each other
 - Analytic: separate words for syntactic information
- Case marking
- Gender
- Phoneme inventories
- Lots more!

Similarities and differences between languages

- Vocabulary
 - Examples you know of?

Similarities and differences between languages

- Word order
 - SUBJECT VERB OBJECT (English)
 - SUBJECT OBJECT VERB (Japanese)

Similarities and differences between languages

- Synthetic vs. analytic languages
 - Analytic: separate words
 - Synthetic: morphemes adding onto each other

1. You truly made me feel comforted.

English

2. Shoqaskatsimaruykicha.

Quechua

Similarities and differences between languages

- Synthetic vs. analytic languages
 - Analytic: separate words
 - Synthetic: morphemes adding onto each other (e.g., agglutinative)

Shoqa ska tsi ma ru yki cha

comfort-PERFECTIVE-CAUSATIVE-1OBJECT-PAST.PERFECTIVE-2SUBJECT-MUTUAL.KNOWLEDGE

Similarities and differences between languages

- Case marking
 - Marking, for example, relationships between event participants
1. Jazzy loves Oliver.
 2. Jazzy loves him.
 3. *Jazzy loves he.

Similarities and differences between languages

- (Grammatical) gender
 - La puerta; la gatita
 - el pueblo; el gatito

Similarities and differences between languages

- Phoneme inventories
 - Click languages: <https://www.youtube.com/watch?v=KZlp-croVYw>

Multilingualism in the world

- More than 50% of the world uses 2 or more languages
- Percentage of bilingual speakers in EU:

*Family languages that can be divided further into distinct languages

Multilingualism in the world

- In the US, ~22% are at least bilingual
- Percentage of people in US who spoke a language other than English at home by year:

Diversity of multilingualism

- Types of bilinguals
 - Simultaneous
 - Sequential
 - Heritage language speakers
 - Second language speakers

Diversity of multilingualism

- Types of bilinguals
 - **Simultaneous:** 2+ languages learned at the same time
 - **Sequential:** one language learned immediately after the first
 - **Heritage language speakers:** children who learn a minority (not widely spoken in the region) language at home which is difficult to fully develop because of insufficient input from environment
 - **Second language speakers:** a second or other language learned after the critical period of language acquisition and after a first language has already been established

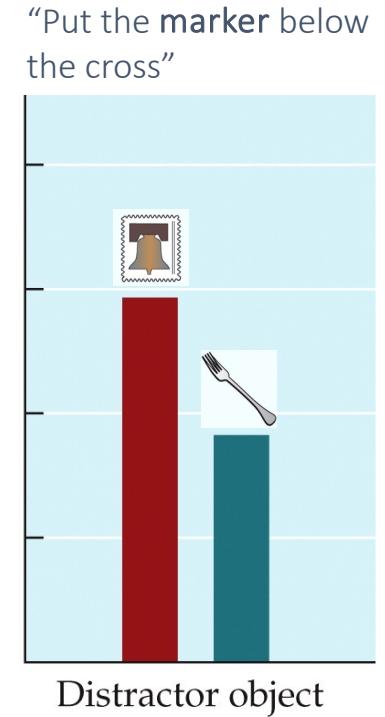

Bilingualism (/multilingualism)

- Linguistic behaviors of bilinguals
 - Evidence from syntactic priming studies
 - Code-switching (Lecture 15)
 - Borrowing
 - Transfer
 - Suggests that the processing system has access to both languages (and it's not completely separate!)
 - Note: priming typically stronger from the dominant language

Bilingualism (/multilingualism)

- Languages are not completely separate during processing
 - Russian-English bilinguals show interference

Sample visual display from eye-tracking experiment (Spivey and Marian, 1999)

Heritage language speakers

- Children who learn a minority (not widely spoken in the region) language at home which is difficult to fully develop because of insufficient input from environment
- **Attrition:** loss of some language function that is present in the adult language
 - A 6-case system (e.g., as in Russian) is reduced to a 3-case system
 - 6 cases: Nominative, accusative, genitive, instrumental, dative, prepositional
 - The cases that are retained substitute in for the cases lost
 - Typically retained: nominative, genitive, dative
 - Complete loss: American Russian heritage speakers lose all case marking except those present in English (nominative and accusative)

Heritage language speakers

Example of attrition

Russian heritage speaker:

1. papa rasskazal devočk-u istori-ja
Daddy-NOM told girl-ACC story-NOM
'Daddy told the girl a story'

Russian speaker:

2. papa rasskazal devočk-e istori-ju
Daddy-NOM told girl-DAT story-ACC
'Daddy told the girl a story'

Second language acquisition

- Called **L2 acquisition** (regardless of what number language it is!)
- Differences between L1 and L2 acquisition
 - L2 rate of acquisition is slower (slower the older you get)
 - L2 acquisition is more difficult
 - practice is necessary
 - Outcomes are more variable than L1 acquisition
 - typically errors are fossilized (stuck)
 - there are many transfer errors

Second language acquisition

- There are typically L2 stages of acquisition, but they appear not to mirror the stages of L1 acquisition
 - L2 learners already have knowledge of a language
 - This knowledge can hinder or help
 - How could it help?
 - How could it hinder?

Second language acquisition

- Transfer errors in L2 acquisition
 - **Transfer errors:** an error created by using a rule in the L1 while speaking in the L2

Second language acquisition

- Markedness
 - **Unmarked:** the simplest and most frequent
 - English active voice: *John kicked the ball.*
 - Voiceless stops (/p/, /t/, /k/) cross-linguistically
 - **Marked:** more complex and less frequent
 - English passive voice: *The ball was kicked by John.*
 - Voiced stops (/b/, /d/, /g/) cross-linguistically

Second language speakers

- Transfer errors & markedness
 - In English, you can end a word with a voiceless or a voiced consonant. In German, you can only end a word with a voiceless consonant.
- What do learners do?
 - English speaking learners of German learn easily that to “sound more German”, they have to pronounce *Tag*(day) as /tak/
 - The voiced sound at the end of the word must be devoiced
 - German speaking learners of English often make the error of pronouncing *wave* as /waf/ and *tap* as /tab/

Second language speakers

- Differences between languages do not necessarily result in difficulty learning
 - English learners of French pronoun position put the pronoun in the typical English spot:
 1. *Je vois les. ATTESTED ERROR OF ENGLISH-SPEAKING LEARNERS
 2. I see them.
 - French learners of English do not make the converse error
 1. Je les vois.
 2. *I them see. NOT ATTESTED IN FRENCH-SPEAKING LEARNERS

Second language speakers

- Automaticity
 - L1 use is automatic; L2 use starts as a controlled process that requires cognitive labor
 - Analogy: automatic vs. standard shift car
- Proceduralization
 - L2 acquisition is more like acquiring a skill
 - It goes from explicit knowledge to implicit knowledge over time and use (and lots of exposure/practice)

Second language acquisition

- <https://www.state.gov/foreign-language-training/>
 - US Department of State Foreign Service Programs ranking of language learning difficulty for native English speakers
 - The more different from English, the harder to learn

Key concepts

- ✓ Diversity across languages
- ✓ Synthetic vs. analytic languages
- ✓ Types of bilingualism
- ✓ Connections between a bilingual's languages during processing
- ✓ Attrition
- ✓ L1 vs. L2
- ✓ Markedness
- ✓ Transfer error
